Fresh Air in Winter

In winter, it is hard to get fresh air in certain rooms. Some rooms in a house are usually colder than others, and if you open the windows it is hard again to heat the room properly. If you keep the windows closed you don't get fresh air; if you keep them open you cannot quickly reheat the room. The

The Perfection Oil Heater is finished in japan or nickel. It burns for nine hours. It has a cool handle and a damper top. It has an automatic-lesseking finame appreader, which prevents the wick two being turned high enough to smoke, and is easy to remove and drop back so that the wick can be quickly clenned. The filler-cap does not need to be acrewed down. It is put in like a cork in a bottle, and is attached to the font by a chain.

The burner body or gallery cannot become wedged, because of a new ice in construction, and consequently, it can always be easily unscrewed in instant for rewicking. The Perfection Oil Heater is strong, durable, well de, built for service, yet light and ornamental.
